G. Coradi,

Weinbergstrasse 49,

Zürich, Switzerland,

Dear Sir:-I have recently purchased, through Eugene Dietzgen & Co., of New York, one of your integraphs, large model, No. 223. I have repeatedly checked its operation against calculated areas, centers of gravity and moments of inertia and have been astonished at the precision of the instrument. The great variety of work ordinarily requiring laborious calculations, which can be readily and accurately done by means of the integraph, has proved a source of profound satisfaction and never-ending delight to me. These instruments deserve to be better known in this country.

I am much interested in your harmonic analyser, your "planimètre universel" and the Hele-Shaw integrator. Will you kindly send me information and quote me prices on these instruments. If you issue a general catalogue of instruments manufactured by you, I should be pleased to receive a copy.

Yours Truly,

*Charles W. Comstock*
